**2021 ANNUAL FINANCIAL RESULTS PRESENTATION
PRE-RECORDED SCRIPT**

**MONDAY, 16 AUGUST 2021
JOHANNESBURG**

SLIDE 1 to 2: Cover | Forward-looking Statements

Introduction of the results presentation covering the agenda/introduction of speakers and reference to forward-looking statements.

SLIDE 3: Introduction | BUSINESS OVERVIEW

Good day and welcome to our financial results presentation.

Financial year 21 has all the hallmarks of a watershed year for Sasol, underpinned by a strong overall business and operational performance.

Over the past 12 months we endured significant headwinds, with key standouts being a prolonged pandemic, which is still with us, and a record-breaking hurricane season in the US.

Against this backdrop, and given where we were a mere 12 months ago, our performance is nothing short of outstanding.

I am delighted that we not only met our short term targets, but indeed exceeded many of them.

Our balance sheet is deleveraged, with notable early wins in our transformation programme, Sasol 2.0.

Our achievements have enabled us to establish a strong foundation and progress a credible pathway to Future Sasol.

Next month at our Capital Markets Day we look forward to sharing our long-term strategy and outlining how we will deliver on our triple bottom line outcomes for People, Planet and Profit.

For today, our focus is on our performance for the 12 months to end June 2021, although I will share a preview of what we will cover at our Capital Markets Day later in September.

SLIDE 4: Delivering on our triple bottom line

In the last two years our mantra of REALISM, FOCUS and DELIVERY have become a way of going about our business at Sasol. Reflecting on 2021, I must acknowledge Team Sasol – our diverse, driven and dedicated employees across the world – who continue to step up, focus and deliver in a period of unprecedented challenges and change.

The 'can-do' spirit for which Sasol people are renowned, remains engrained in our DNA, and I am humbled by their continued resilience and determination in meeting our promises.

2021 was an important year of delivery for Sasol as we climbed more rungs in the ladder to fulfil our People, Planet and Profit aspirations.

The safety, health and wellbeing of our employees is our highest priority. I am pleased that our interventions resulted in improvements on several key safety indices, while we maintained robust COVID-19 protocols and practices in all our workplaces.

To help our colleagues impacted by devastating hurricanes in the US last year, we provided temporary housing, interest-free loans and other vital resources.

This was to ensure Sasol families received the help needed to get back onto their feet.

Our people focus extends across our communities and stakeholders, as evidenced by the billions of rands we continue to invest in social impact programmes.

In a year of significant volatility,

I can also proudly state that we sustained product supply to our customers, enabling them to meet their business objectives and commitments.

On planet, we are acting with urgency to chart a path forward to decarbonise our business and as part of that we will share new climate change targets at our upcoming Capital Markets Day.

We have a firm commitment to deliver on our sustainability ambitions and we have continued to forge new partnerships to support our objectives, such as those in the green hydrogen space with Toyota Motors South Africa and the IDC, among others.

On profit, we significantly exceeded our cash conservation and asset divestment targets for financial year 21. Delivering on these critical levers has been instrumental in averting the need for a rights issue.

Our balance sheet is now substantially de-risked from where we were a year ago, and with our Sasol 2.0 transformation programme implemented, and now ramping up, we are on course to restore compliance with investment grade credit metrics. That is a huge achievement.

I believe we are now on a sound footing to deliver competitive returns for our shareholders, all of which will be better for the planet and for people.

SLIDE 5: What you will hear today

Within the context I just outlined, allow me to share what you will hear from us today.

In our relentless pursuit of zero harm we continued to prioritise employee and stakeholder wellbeing.

This we did by maintaining a laser sharp focus on safety and robust COVID-19 prevention measures, which supported uninterrupted operations.

We also ensured ongoing shared value creation with our social partners.

For financial year 21, our business results both met and surpassed expectations.

This was underpinned by a strong operational performance, exceeding our balance sheet objectives, managing liquidity well above our target – and delivering value through our strategy-led asset divestment programme.

This past year we continued to take decisive measures to realise our Future Sasol aspirations. Notably we recorded early progress on our transformation programme, while advancing our sustainability agenda as we accelerate efforts to decarbonise our operations.

SLIDE 6: Safety performance improved following focused interventions

Safety is a matter close to the hearts of everyone at Team Sasol and is an area we will never stop working to improve, so that we eliminate workplace fatalities.

Our safety performance, as depicted by the bar graph, shows we are on the right trajectory with marked decreases in our lost workday cases, recordable case rate and fatalities.

While we experienced one fatality in financial year 21, we also had one early in this current financial year.

These tragic fatalities serve as a stark reminder that our journey to zero harm is far from complete and we must remain relentless in our pursuit of this objective.

Let me take this opportunity to again express our deepest condolences to the family, friends and colleagues of Mr Samuel Molumo and Mr Lebogang Lebepe.

Their tragic deaths highlight the critical importance of constant safety awareness and vigilance in the workplace.

We are also saddened by the loss of our employees as a result of the Covid-19 pandemic, and extend our condolences to the families, friends and colleagues of our employees.

We will continue to optimise and further embed our prevention of High Severity Incident Programme. Here, the emphasis rests on two key imperatives that operational discipline demands of us:

- * One, strive to carry out each task the right way every time; and
- * Two, adhere to standards and procedures at all times.

Our commitment to our people is that we will continue to promote and develop a deeper understanding of human behaviour. Here, a key

element of our approach is, that we shift from leading safety through compliance only, to leading safety with both care and compliance.

Humanising safety links strongly to the tone being set by our leaders, while also ensuring a fair and accountable safety culture across the organisation.

SLIDE 7: Playing a leading role in society

Our Covid-19 response is centred on our priority to care for our employees, which extends to our contractors and communities. An effective COVID-19 response programme has been critical to maintaining our operations.

This is why we have de-crowding interventions in place, as well as other measures like surveillance, strategic testing, early case detection, isolation and clinical care.

We also support the view that accelerated efforts in vaccination remains the best way to slow the pandemic, save lives, drive a truly global economic recovery and prevent further dangerous variants.

We endorse vaccination against COVID-19, as well as following existing preventive controls, such as mask-wearing and social distancing.

Within this context, we have enabled employee vaccination through Sasol facilities at our operating sites in Secunda, Sasolburg and Mozambique, while also providing support for community programmes.

We are continuing these efforts at our Secunda site ahead of and during the upcoming major shutdown in September this year.

A large number of employees and contractors will work on the site during this period and we will manage this event in compliance with all relevant regulatory requirements and within the context of basic human rights.

We also donated more than 1,4 million litres of sanitiser in Southern Africa and continued fuel donations to emergency services.

As I mentioned a short while ago, we also provided comprehensive care and financial support programmes for our employees impacted by natural disasters.

Underpinning our social impact programmes, is our pursuit for growing shared value, being a catalyst for change and a force for good.

In this spirit, we spent over 24 billion rand with black-owned suppliers, of which some R16 billion rand was spent with black women-owned businesses.

More than 10 million learners continued to benefit from our high quality educational resources and programmes, while we invested over 1,6 billion rand on programmes spanning skills development, education, health and community service infrastructure during this past year. Sasol ranks here as one of the leading corporations in South Africa that continue to invest in her people and communities.

While much of this spend is centered on Southern Africa where the need is greatest, our programmes span all our key regions, with a notable example being the US. In Lake Charles, Sasol contributed 1 million US dollars to a STEM-based children's museum as well as a science and nature centre, in collaboration with the other local leaders to strengthen a diverse workforce development pipeline, in the region.

To conclude on this area, despite our recent challenges, Sasol remains a significant contributor to South Africa's gross domestic product and the fiscus as a leading corporate tax payer.

SLIDE 8: Strong business recovery - delivered of targets

Through Team Sasol's commitment we delivered a strong overall operational and financial performance, against the backdrop of multiple challenges faced during the year.

In Energy - our Secunda Operations volumes were up 3%, benefiting from innovative shutdown planning, notwithstanding some operational challenges experienced during the year.

Mozambique production was 2% higher and in Mining, productivity was down by 1% impacted by the introduction of a full calendar operations shift system that will significantly improve our mining operations and will flow through in improved mining productivity, in financial year 2022.

In Chemicals, we experienced strong cash flows in the fourth quarter of financial year 21 from our US business and overall normalised sales volumes were 2% higher, aside from the adverse weather events and the divestments of part of, the US base chemicals assets.

I will now briefly summarise our financial performance, which Paul will cover in greater detail.

Overall, Sasol's financial position improved significantly underscored by delivery against our targets and improved macros.

Our adjusted EBITDA was 48 billion rand, with a massive improvement of 75% in our free cash flow.

Our net debt to EBITDA ratio at the end of the reporting period was 1,5 times, which is well below the covenant of 3,0 times, reflecting a significant reset of our balance sheet.

Normalised cash fixed costs were 4,2% lower, reflecting continued discipline in cost management for the reporting period.

Our capital expenditure of 16 billion rand was a consequence of ongoing focused capital spend, while ensuring the safety of our people and maintaining the integrity of our assets.

Financial year 21 - was a strong win - by Team Sasol.

SLIDE 9: Optimised asset portfolio supports Future Sasol ambitions

Looking at our strategic portfolio, in America all units are online following the adverse weather events I mentioned earlier.

As a reminder, we now have the joint venture with LyondellBasell in place for three of the seven LCCP units, namely the ethane cracker, and the two low density polyethylene units, but Sasol has full ownership and control of the US specialty chemicals business.

I am pleased to say that our Ziegler, Alumina and Guerbet units are all operational, and ramping up well. This was critical to making Chemicals America a strong contributor to cash flow in the second half of the year.

The Louisiana Integrated Polyethylene JV units, are also running at high rates.

Mozambique remains core to Sasol, as the country is central to our feedstock transformation strategy.

The PSA project allows us to continue delivering on our commitments to Mozambique, and to access additional gas supply to South Africa.

The project schedule is now also de-risked by delinking its start date from the start date of the gas-fired power plant project, CTT, which enables Sasol to continue execution of the upstream portion of the project without further delay.

We remain committed to the development of in-country monetisation options in Mozambique.

To progress the project, we signed key commercial agreements for the PSA and I am pleased to say that the exploration and infill well drilling campaign re-started earlier this month.

Our asset divestment programme has been very successful. We committed to shareholders and stakeholders that we would divest from assets using our strategy as the guide and safeguard value. We have held to these principles and in the process transformed our balance sheet and sharpened the focus of our Future Sasol ambitions.

Since March 2020, when we commenced the accelerated programme, we advanced divestments to the value of 3,8 billion US dollars, and as we conclude these, the programme will draw to a close.

We believe, we now have a focused portfolio positioned to deliver competitive returns, however we will continue to maintain the discipline of challenging ourselves, as to whether we are making the most of our assets and whether we are the best owner.

I will now hand over to Paul to discuss our financial performance for the period in greater detail.

SLIDE 11: What you will hear today

Thank you Fleetwood and good day ladies and gentlemen.

Our 2021 financial results are characterised by a remarkable turnaround of our financial position, despite the headwinds we faced.

Our EBITDA increased by 38% year on year to R48,4 billion compared to a 4% increase in the Rand per barrel price and really speaks to the fundamental improvement of the underlying business' performance during FY21.

We delivered on our 6 billion US dollar response plan, announced to the market in March 2020 and again significantly exceeded our 1 billion dollar savings target for financial year 2021.

In 2020, I spoke about our need to deleverage the balance sheet, and the steps we were taking to improve our position.

The plan was clear, and aimed to generate enough cashflow through self-help measures and asset divestments to reduce our net debt to an acceptable level.

It was an ambitious plan, but as you can see from this year's results, we have delivered in spades.

Our gearing has decreased from 117% in financial year 20 to around 61% at 30 June, and net debt to EBITDA is now down to around 1,5 times.

Absolute net debt is at 5,9 billion US dollars, and we achieved this without executing a rights issue.

As Fleetwood mentioned, we advanced our asset divestment programme in a relatively short period, with the majority of the 3,8 billion US dollars proceeds already banked.

The quality of our future earnings will not be compromised and our optimised portfolio is now more aligned to our future strategy and able to deliver competitive returns even in volatile markets.

Our Balance Sheet capital structuring efforts are also progressing well as we managed to issue bonds to the value of 1,5 billion US dollars. We issued these bonds at very competitive rates and also balanced our future debt maturity curve.

Despite this significant progress, there is still the risk of a prolonged period of economic uncertainty.

On this basis, although the Board sees the restoration of dividends as a priority, the decision has been taken to continue with the suspension of dividends at this stage. This is a prudent step until the debt levels are further worked down.

We believe that our Balance Sheet, through these efforts, will give us a really solid platform from which to execute our Future Sasol strategy without being distracted by short term deleveraging imperatives as we faced last year.

Building from this stronger platform, our Sasol 2.0 transformation programme is achieving early results, which will be ramped up to deliver sustainable improvements.

This will ensure the company is competitive, highly cash generative and sustainably profitable even in a low oil price environment.

In the next few slides, I will expand on the factors which impacted our results in more detail.

SLIDE 12: Global macroeconomic recovery

The information on this slide reflects year on year comparison of the key macro-economic indices impacting our business.

While the pandemic continues to create market volatility we have seen a continued stronger demand across most end markets.

Oil prices increased significantly during the second half of the financial year and we also saw a strong recovery in liquid fuels demand in South Africa in financial year 2021 to mostly match pre-Covid levels.

The rand strengthened against the dollar in this period, which negatively impacted profitability but an 18 percent stronger closing exchange rate benefitted us in the translation of our US dollar denominated debt at 30 June 2021. We do expect the Rand to continue to trade at these stronger levels during FY22.

Ethane prices increased 34 percent compared to financial year 20, and prices are expected to increase to between 25 and 32 US cents per gallon as new crackers come online and demand picks up.

The Chemicals business benefitted from a 17 percent increase in the average Chemicals sales basket price.

A significant increase in polyethylene prices well above the 1 100 US dollar per ton mark, contributed to strong margin recovery in the chemicals business. We expect prices to normalise at between 1 000 to 1 100 US dollars per ton, which will continue to support margins in our chemicals business.

SLIDE 13: Group profitability by segment

Turning to the financial results, we see a significant improvement in our profitability for the group compared to the previous financial year.

As Fleetwood mentioned, this excellent performance was underpinned by meeting targets, and even exceeding our comprehensive response plan targets. We further benefited from the strong recovery in macro's which I covered in the previous slide.

As mentioned, we reported an increase in EBITDA of 38 percent, despite the challenges we faced in the financial year.

Free cash flow improved by 75 percent to R19,4 billion, building on the free cash flow inflection point which we reached earlier this year.

We have restored our free cash flow generating ability which will assist us to further delever the balance sheet, restore dividends and execute our Future Sasol strategy to be a more sustainable and greener business.

Despite this challenging year, we delivered R2,5 billion in cash fixed cost savings or a normalised real improvement of 4,2% year on year.

Our future cost base now includes the benefits of the work-force transition process and will therefore have a positive impact on our cash fixed cost for financial year 2022.

The LCCP, which is now 100% online and ramping up to plan, delivered a meaningful contribution to profitability and is expected to continue to be a key driver in the contribution to future business cash flows.

Earnings were impacted by non-cash adjustments, most notably the remeasurement items which includes the impairment of our Synfuels refinery and the wax value chain, which I will unpack in the next slide.

Core HEPS of R27,74 per share was up by 84 percent compared to the prior period and underpins the fundamental improvement of the business during FY21.

SLIDE 14: Segmental highlights

Let me now turn to the segmental highlights, starting with the Energy business.

Mining benefitted from a combination of higher sales volumes, higher export prices and lower external coal purchases.

As previously mentioned, we implemented Fulco during the year, which resulted in a higher production cost per ton as we pre-invested in labour and associated support services to enable the additional shifts.

We expect to see the benefits of this initiative to start ramping up from financial year 22 and beyond.

Turning to our Gas segment, our Mozambique gas operations were stable and the value chain benefitted from higher external gas sales in South Africa, which resulted from higher demand from resellers and customers.

In July, NERSA published a final decision on the maximum gas prices. This resulted in a provision of R1,4 billion for the retrospective application of the final ruling, which negatively impacted this segment's adjusted EBITDA for the financial year.

We are pleased that this matter has been concluded and that shareholders have clarity of the impact on our business.

In line with our strategic objectives, we divested our interest in the Gabon oil producing asset in February 2021, as well as the divestment of our interest in the Canadian Montney shale assets which was completed in July 2021.

Our Fuels segment, which faced unprecedented challenges, has seen a strong recovery in demand, following the easing of lockdown restrictions in South Africa.

Demand for petrol and diesel have recovered to pre-COVID levels, with jet fuel demand remaining under pressure.

Our adjusted EBITDA increased by 22 percent, benefiting from focused cost saving efforts and Secunda Operations producing at full rates for the financial year.

These benefits were partially offset by the stronger Rand/US dollar exchange rate.

The results were impacted by an impairment of approximately R25 billion, relating to our Synfuels refinery Cash Generating Unit.

This was mainly due to our stronger outlook on the Rand/US dollar exchange rate, and lower long term oil price outlook.

Long-term pricing volatility remains a challenge in the assessment of potential impairments at period end.

We believe that we have followed a realistic and conservative approach in assessing future macroeconomic factors and the potential impact on future cash flows.

EBITDA contribution from ORYX GTL increased by more than 100 percent compared to the prior year. Following the shutdown in quarter three, the plant achieved an average utilisation rate of 98 percent.

Turning to our Chemicals Business:

Chemicals Africa saw higher sales volumes compared to the prior year. This was despite the ongoing impacts of Covid-19 and a power outage at the Sasolburg site caused by a severe storm at the end of December 2020.

The average sales basket price for the financial year was 14 percent higher, due to a combination of improved demand, particularly for our Polymers and Solvents products, higher prices and tighter global supply conditions.

This resulted in a 37 percent increase in EBITDA. Earnings were impacted by impairments of R9 billion, mainly on the wax value chain, driven by higher future feedstock prices.

Chemicals America was significantly impacted by the aforementioned weather events and the US asset divestments.

Despite these headwinds, this segment delivered a very strong performance, with adjusted EBITDA increasing by more than 100 percent to R4,5 billion.

The segment also benefitted from a 24 percent higher average sales basket price.

The average utilisation rate of both crackers in quarter four was close to nameplate capacity, helping to lift the sales volumes for the quarter by 37% when compared to the previous quarter.

Chemicals America achieved a monthly EBITDA run-rate of approximately 75 million dollars in quarter 4, benefitting from the ramp-up and higher ethylene and polyethylene prices resulting from the arctic storm in February 2021.

This significantly contributed to the Group's overall profitability.

Lastly, Chemicals Eurasia benefitted from higher sales volumes, despite the divestment of Sasol's share in the Sasol Wilmar Joint Operation.

The increase in sales volumes was driven by improved market demand, notably for our Surfactants and Wax products.

SLIDE 15: FY22 outlook – Maintaining momentum of delivery

Turning to the outlook for financial year 22.

We will look to maintain momentum by delivering on our targets to further strengthen the business.

We expect the following from our Energy business:

Mining operations will improve productivity levels as we fully ramp-up Fulco, and realise the benefits of the pre-investment made during financial year 2021.

Ultimately, we hope to reduce our external purchases over time.

The exploration and infill well drilling campaign, which was suspended due to COVID-19 restrictions, has resumed in early August.

As a result, we expect Mozambique gas production to be lower, at 106 to 110 billion standard cubic feet.

As demand recovers for South African liquid fuels, we expect our sales volumes to increase to a range of 57 to 58 million barrels.

We anticipate that the refining environment will continue to be challenged, reflecting reduced global product demand.

Secunda operations will be negatively impacted in financial year 22 by lower than expected coal quality and lower natural gas supply.

Taking these factors into account, we adjusted our production forecast down to 7,4 – 7,5 million tons.

Both these matters are receiving management's highest attention to ensure that we find solutions to mitigate the impact on our business.

For our Chemicals business, the sales volumes for Chemicals Africa are expected to be 2 to 4 percent lower compared to financial year 2021, mainly due to lower feedstock availability in the year.

In Chemicals America, we expect sales volumes to be in line with the prior year.

The gain in volumes resulting from the ramp-up of our specialty units is offset by the impact of the asset divestments and the planned maintenance shutdown of the Sasol-owned East ethylene cracker.

The cracker shutdown is planned to commence in October 2021, and is expected to be down for approximately 50 days.

The ramp up of the specialty chemical units, together with higher demand will positively impact the profitability of this segment in financial year 22.

Chemicals Eurasia's sales volumes are expected to be between 4 to 6 percent higher compared to the prior year resulting from an expected recovery in market demand post the roll-out of Covid-19 vaccines and reopening of economies.

SLIDE 16: Optimal capital spend to enable Future Sasol

Capex of R16 billion was below our guided range of R18 to R20 billion for financial year 21.

This resulted from a combination of shutdown optimisation, increased cost consciousness regarding non-critical projects and deferrals due to the impact of Covid-19.

Notwithstanding our strict focus on cost, we continue to prioritise key maintenance projects and have kept sustenance spend broadly in line with industry norms.

Our capital expenditure forecast for the financial years up to 2025 is R20 to R25 billion per year, which is in line with our Sasol 2.0 target.

It is also important to re-emphasise that there is sufficient sustenance, compliance and environmental capital included in our forecast to ensure the reliability and safety of our plants is not compromised.

We will also consider small-scale, high-return growth opportunities going forward.

We remain committed to our overall capital allocation framework, and will continue to optimise the capital portfolio as we implement more Sasol 2.0 initiatives and achieve the desired outcomes.

We will provide more guidance on our capital allocation framework and strategic growth options at our upcoming Capital Markets Day.

SLIDE 17: Significant balance sheet reset, as promised

In February, I gave you an update on our plan to deleverage the balance sheet, which included delivery of our response plan targets, asset divestments and stronger cash generation from operations. This, together with an improved macro environment also meant that we successfully mitigated a rights issue.

Today, I am pleased to say that we have delivered against all targets, as promised.

In fact, we exceeded targets in some areas, which, together with a strong rand dollar closing rate, contributed to a much stronger financial position opposite expectations.

We delivered approximately 2,1 billion US dollars, in savings against a target of 1 billion US dollars set out as part of our comprehensive response plan.

This was achieved through focused efforts to reduce our cash fixed costs and capital spend, as well as working capital unlock. These initiatives also resulted in a general cost consciousness mind set throughout the organisation, which will position us well to deliver the Sasol 2.0 targets over the next few years.

Asset divestments were executed swiftly, delivering a total value of 3,8 billion US dollars, with 3,1 billion completed and proceeds banked.

Together, these initiatives enabled the repayment of approximately 4 billion US dollars of debt, including settling all our ZAR banking facilities, some dollar based term loans and a significant portion of our revolving credit facility.

Our net debt to EBITDA ratio ended at 1,5 times, which is well below our covenant threshold of 3 times, and gearing decreased from 117% to 61% at the end of financial year 2021.

Excluding remeasurement items, the gearing ratio would have ended at 51%.

We continue to assess our mix of funding to ensure that we have funding from a range of sources and a balanced debt maturity profile. The next 1 billion dollar bond repayment is due in November 2022.

Given these gains it's no surprise that our liquidity position has also improved considerably, significantly above the 1 billion US dollar liquidity headroom target, to more than 2 billion US dollars. In addition to this, we made good progress on our hedging programme for foreign currency, crude oil and ethane exposure.

The hedging programme at current oil levels will result in an average oil price of 67 dollar per barrel for financial year 22 ensuring a high probability of business cash flows to deleverage the balance sheet.

In terms of outlook, we will continue to prioritise the deleveraging of our balance sheet and debt levels in the coming financial year, sustaining net debt to EBITDA below 1,5 times, and a net debt below 5 billion US dollars by the end of financial year 2022.

This will ensure flexibility to execute our Future Sasol strategy in an ever-changing macroeconomic environment, and restore our investment grade credit metrics and blue-chip status.

Finally, we intend to resume dividend payments to our shareholders once we have achieved our balance sheet targets.

More detail on our capital allocation framework will be shared at our upcoming Capital Markets Day in September 2021.

On that positive note, I will now hand back to Fleetwood for the closing.

SLIDE 18: Future Sasol

Thank you Paul.

To conclude on my part of today's presentation, I will provide an overview of our pathway to full potential.

SLIDE 19: Progressing a credible pathway to Future Sasol

Our current reality is materially better than where we were a year ago and through our solid delivery of business results in FY21, we have a strong foundation for Future Sasol.

Our foundation is underpinned by our deleveraged balance sheet and a new operating model that allows for greater agility, faster decision-making and enhanced customer centricity.

Our portfolio is more focused and our chemicals business in America is fully invested, with our base chemicals JV finalised and running smoothly.

Supporting these advantages, is our disciplined capital allocation framework to guide our investment decisions.

Our response plan, has stabilised the business and now we will ramp up, our implemented Sasol 2.0 transformation programme. This programme enables us to reposition the business and deliver value through a robust pipeline of initiatives.

In this regard, we are already recording progress against our financial year 22 targets.

These targets are:

- * A gross margin increase of up to 1,5 billion rand;
- * cash fixed cost savings of up to 3 billion rand;
- * maintenance capex of between 20 and 25 billion rand; and
- * keeping our working capital at 14%.

Our intent is to maintain the cost competitiveness of our South African value chain, at an oil price of 30 to 35 US dollars per barrel - to 2025.

Last week the IPCC released their landmark 6th Assessment Report, confirming the need for deep emission reductions to stabilise the climate.

I would like to take the opportunity, to reaffirm our strong commitment for continued action and transformation of our operations.

Looking ahead, next month at our Capital Markets Day you can expect to hear from us on topics that will cover:

- * our resilient and focused strategy to deliver value;
- * a significant step up in our GHG emission reduction targets;
- * clarity on delivery pathways and how we will leverage Sasol's competitive strengths and embed our shareholder value proposition; as well as
- * customer focused solutions, for a sustainable world.

We have built up credibility to deliver Future Sasol through decisive action, and will continue along this track, guided by our purpose, innovating for a better world.

In closing, financial year 21 was the positive shift we needed for all our stakeholders.

Let me take this opportunity to again thank our committed employees for always stepping up.

Their extraordinary efforts delivered the sterling performance, we shared with you today.

We also thank our shareholders, banks, suppliers and all other stakeholders for your patience and support.

During the past year our global customer base continued to trust Sasol as their supplier, and we are grateful for the business we do with you and also into the future.

We believe, we have not only turned the corner, but are well on our way to deliver Future Sasol with blue chip status – a competitive, relevant, value delivering, sustainable and greener business.

On that note, I conclude today's results presentation. Paul and I thank you for listening.

>>END<<
